

**It's not a one-size-fits-all world.
A one-size-fits-all health care reform
solution won't work for rare diseases.**

What do they have in common?

alpha-1 antitrypsin deficiency primary immunodeficiency disease hemophilia

They all have rare diseases and need lifesaving plasma protein therapies. The Plasma Protein Therapeutics Association and its members work tirelessly to ensure patient access to critical, lifesaving therapies for people with rare, genetic diseases and disorders. Congress must ensure that these small, fragile patient populations and their physicians have access to the medically appropriate plasma protein therapy.
