

Optional Use Resources for Plasma Donor Management: 2019 Novel Coronavirus (SARS-CoV-2) and COVID-19 Infection

1. Plasma donor arrives at donation center.
2. Optional use of wall/poster signage/website messaging (**ATTACHMENT 1**) developed by the collection facility to inform the plasma donor of the option to self-defer.
3. The donor is given the printed “New Information on Plasma Donation and the 2019 Novel Coronavirus (COVID-19)” and asked to read. (**ATTACHMENT 2**)

There is no requirement to implement ATTACHMENTS 1 or 2 presented here – this is intended as an example that can be easily modified. Plasma centers can elect to post signage or provide handouts when and where they deem necessary. Each center will determine which of the three criteria for deferral to use in messaging, noted below.

After reading the “New Information” document:

- Donor self-defers and leaves prior to registration.
- Donor does not self-defer but has questions about the risk for coronavirus exposure and/or infection.
 - If questions arise prior to donor screening, Flowcharts 1, 2, and 3 (**ATTACHMENTS 3, 4 & 5**) are available to assist the donor about the risk for COVID-19 and determine deferral if needed.
 - Donor center should follow current SOP regarding information shared by the donor outside of the screening process and any documentation of the conversation.
 - For the most up to date information regarding travel, refer to the CDC’s [website](#).
- Donor does not self-defer and proceeds to registration.
 - If questions arise at the time of donor screening, Flowcharts 1, 2, and 3 (**ATTACHMENTS 3, 4 & 5**) are available to assist the donor about the risk for COVID-19 and determine if a deferral is needed.
 - Donor center should follow current SOP regarding information volunteered by the donor during the screening process and any documentation of the conversation.
 - For the most up to date information regarding travel, refer to the CDC’s [website](#).
